

The SpadeVista Migration

A planned, methodical transition designed around the way your business should run — and built to deliver value early.

A platform change is one of the few moments a business gets to deliberately design how its work should run. We map every workflow, integration and dependency, then design the future state on evidence rather than inheritance. **The platform is the vehicle. The improved process is the deliverable.** Rigor of this depth traditionally took twelve to twenty-four months; our methodology delivers it in **90 to 120 days, timed to your contract cycle, with the business running uninterrupted throughout.**

STAGE 1

Dig Deeper

Map the environment in full and baseline how the business performs today in numbers.

STAGE 2

Gain Clarity

Design the future state deliberately and quantify the delta difference. Fixed scope, fixed price, firm date.

STAGES 3-6

Solve Smarter

Build to the design, migrate validated data, run in parallel — value lands early, operations never pause.

THE JOURNEY AT A GLANCE

Stage	Timing	Outcome	The SpadeVista difference
1. Discovery	Weeks 1-2	Current-state snapshot and engagement plan	Environment mapped in days — the timing plan built before anything commits
2. Blueprint	Weeks 3-4	Future-state design, fixed-scope proposal	Options modeled and priced, so the decision rests on numbers
3. Build	Weeks 5-9	Working platform, reviewed collaboratively	Configuration accelerated by HoosAI, engineer-reviewed, shaped with your team weekly
4. Data & parallel run	Weeks 8-12	Reconciled data, trained staff, systems side-by-side	Mapping and reconciliation planned from day one — the step most migrations leave until last
5. Cutover	Week 13	Live, timed to your contract cycle	Proven in parallel first — a scheduled event, not a risk
6. Support & Success	Week 14 onward	Stabilized platform, named owner, roadmap	A dedicated Technical Success Manager, not a ticket queue

Why timing decides everything

Existing agreements typically auto-renew on a notice window of 60 to 120 days before term end. **That window — not the expiration date — is the real deadline.**

A 90-120 day transition should begin 4-5 months ahead of the notice date. Beginning with runway puts go-live in the same week the current term concludes: no overlapping cost, no compressed schedule, no renewal by default.

The first question worth answering: **what is the exact date notice must be given on your current agreement?** Establishing that is step one of Stage 1 — at no cost or obligation.

What you own at the end

The platform. Built around your workflows, owned outright. No per-seat licensing, ever.

Your data. Migrated, reconciled and validated — in your environment, under your control.

The measurement. Results reported against the current-state baseline captured in Stage 1. If the delta difference didn't close, you hear it from us first.

A named owner. A Technical Success Manager accountable for your account after go-live.

Own your timeline — a transition planned around your business, on your schedule, without a day of disruption.

- Fixed scope, fixed price
- Named delivery owner throughout
- Business runs without interruption
